

Full Stack Software Developer

I am equally intrigued by both front-end and back-end languages/technologies and hope the next step in my journey will foster these interests together.

2012-04 - 2015-07	Software Engineer - Professional Services DialogTech -Custom application development (PHP, Javascript & MySQL), Scoping and Project Management for Professional Services projects
----------------------	--

UI Router, Ionic

Code is available upon request.

- Backend JSON REST APIs for crud operations
- RDS MySQL for storage of configuration/credentials
- KMS for encryption of customer credentials
- Adobe Analytics
 - Configuration via REACT components
 - Collected Adobe Analytics cookie values via Javascript from client's website
 - Sent Adobe Analytics cookie values alongside DialogTech call data using REST API
 - Sent additional data via offline conversions FTP server
 - Cloudwatch for monitoring/alerting
 - Used PHP Cron for scheduling requests to vendor
 - SQS for queuing/delaying vendor requests
- Adobe Media Optimizer (REST/FTP)
 - Configuration via REACT components
 - Sent AMO cookie value alongside DialogTech call data using FTP server
 - Cloudwatch for monitoring/alerting
 - Used PHP Cron for scheduling requests to vendor
 - SQS for queuing/delaying vendor requests
- Adobe Launch Extension for DialogTech
 - Built extension using Adobe extension framework
- Amazon Connect (REST)
 - Used Cloudformation and Lambda to integrate DialogTech call data with Amazon Connect Contact Flows (IVR)
- DoubleClick Search/Campaign Manager (Oauth/SDK)
 - Configuration via REACT components
 - Oauth login
 - Used Google PHP SDK to send offline call conversions to DoubleClick platform for attribution against Search/Display traffic.
 - Cloudwatch for monitoring/alerting
 - Used PHP Cron for scheduling requests to vendor
 - SQS for queuing/delaying vendor requests
- Google Analytics (REST)
 - Used offline conversions API to send Events to Google Analytics for attributing DialogTech calls to web traffic
 - Cloudwatch for monitoring/alerting
 - Used PHP Cron for scheduling requests to vendor
 - SQS for queuing/delaying vendor requests
- Marin (FTP)
 - Configuration via REACT components
 - Used Marin FTP Server to send DialogTech data for bid management attribution
 - Cloudwatch for monitoring/alerting
 - Used PHP Cron for scheduling requests to vendor
 - SQS for queuing/delaying vendor requests
- Yext (Oauth/REST)
 - Built integration via Yext app store using vanilla Javascript and REST APIs to allow shared customers to view call tracking phone numbers alongside Yext locations.
 - Oauth Login

KEY PROJECTS - PROFESSIONAL SERVICES

Custom Tagging REST API

- JSON endpoints built with PHP for tagging DialogTech application instances with customer data
- Basic Authentication
- RDS MySQL Storage

Custom automated outbound call survey application for home delivery provider

- Triggered by webhook from logistics software with customer delivery information
- Used PHP/MYSQL to trigger IVR survey phone calls with DialogTech API
- Survey results sent via custom email triggered by IVR data

Custom IVR integrated with Healthcare cloud solution Evolution1 for health spending plan provider

- Customer data synced with DialogTech using PHP/MYSQL/SFTP/CRON
- Data lookup on inbound IVR phone calls using DialogTech IVR web hooks and Evolution1 SOAP api

Custom Salesforce Integration for health products provider

- Lookup and insert of Salesforce Leads/Cases/Tasks from DialogTech agent panel using Webhooks and Salesforce SOAP API for inbound phone calls

- Daily cron update of Salesforce case/task records with additional phone call data using Salesforce BULK API

CURRENTLY BUILDING

- www.mtbdash.com for mountain bike trail info, conditions, conversation & videos
