SUMMARY

AI and human friendly full stack developer. Building cool things with Claude and cautiously enjoying this new approach to software engineering. My focus on smart architecture, clean local development, user-friendly design and lots of test coverage are more important than ever. Open to backend, front-end or full stack positions in my next role.

WORK EXPERIENCE

Senior Software Engineer (Founder) Feb 2024 – Present
Onward Code
www.onwardcode.com
Independent software studio building consumer web platforms.

Designed, built and launched CarCritical.com and MTBDash.com, content and community platforms for automotive and mountain-bike enthusiasts

- React, TypeScript, Python, Django, PostgreSQL, Docker
- Azure AI Vision, Groq (LLM inference), Claude Code
- Google, YouTube and weather APIs

Senior Software Engineer 2 Mar 2022 – Feb 2024
Campspot
www.campspot.com
Back-office SaaS for campsite reservations

- Java, Angular, Hibernate, Kafka, Node.js, PostgreSQL
- Microservices, Docker, Kafka, AWS
- Remote Lock Integration
- Release Management and bug duty rotation

Software Engineer Aug 2019 – Feb 2022
Neighborhoods.com
www.neighborhoods.com
Real Estate websites for 55+ demographic and general audience

- PHP 7, PostgreSQL
- Eventually Consistent Architecture
- Symphony, Zend frameworks
- Microservices, Docker
- Materialized Views

Software Engineer Apr 2012 – May 2019
DialogTech
www.dialogtech.com
Marketing Automation and Telephony SaaS Product

- Professional Services and Custom Work
- Integrations and Partnerships
- PHP, Zend Framework, AWS, MySQL, React, Docker

EDUCATION

MBA in Management, Saint Xavier University 2005 – 2007

BS in Marketing, Lewis University 2001 – 2005

SKILLS

PHP, Java, Python, JavaScript, Angular, React, AWS, Docker, Claude, MySQL, PostgreSQL

AI STRATEGIES

Using AI let's you code fast, but that does not make building easy. In the hands of a Senior Software Engineer, tools like Claude are very powerful. In the hands of others, it can be very dangerous to a production web application. Here are the techniques I use to make sure AI helps more than it hurts.

- Defense is the best offense
- Assume your AI will not remember why or when something was done
- Guard your secrets with your life
- Don't forget to help your AI
- Push back on everything.
- Don't give AI the keys to the castle
